A Leica Microsystems Company

Fluorescent Labels and Dyes

ATTO-TEC offers a new generation of patented fluorescent markers. They are designed to meet the requirements for molecular labels in the area of life sciences. ATTO-dyes can be applied as fluorescent labels for a large variety of bio-molecules, i.e. proteins, oligonucleotides etc. The dyes are highly suitable for high-resolution microscopy, like STED, STORM, SIM etc., as well as single-molecule detection applications.

ATTO-dyes stand out for their reactivity, purity, brightness, and in particular their photostability. The dyes are available in a large number of modifications, e.g. with free carboxylic acid group, as N-hydroxysuccinimidyl(NHS)-esters, maleimides, amines, azides, alkynes, iodoacetamides, tetrazines as well as conjugated to phalloidin, streptavidin, biotin, and various glycerophospholipids. For detailed information on all products and derivatives please visit www.atto-tec.com.

λ_{abs} longest-wavelength absorption maximum
 ε_{max} molar decadic extinction coefficient at the longest-wavelength absorption maximum
 λ_{fl} fluorescence maximum
 η_{fl} fluorescence quantum yield
 τ_{fl} fluorescence decay time
 Δq change of electrical charge on conjugation with ATTO-dyes

CF₂₆₀ $CF_{260} = \varepsilon_{260}/\varepsilon_{\text{max}}$. Correction factor used in calculation of degree of labeling (DOL) in case of dye-DNA conjugates.
CF₂₈₀ $CF_{280} = \varepsilon_{280}/\varepsilon_{\text{max}}$. Correction factor used in calculation of degree of labeling (DOL) in case of dye-protein conjugates.
MW molecular weight

Solvent:
Phosphate Buffered Saline (PBS), pH 7.4

All absorption and emission spectra are available in digitized form (ASCII-file) on www.atto-tec.com under "Spectra", at each individual dye description.
