LEICA M822
Ophthalmic Surgical Microscope
LEICA M822

Legendary Leica, visionary technology

The Leica M822 ophthalmic surgical microscope features a dual illumination system with an LED for the main light and halogen for bright and stable red reflex. This innovative illumination system, combined with world class Leica optics, provides surgeons with outstanding vision to support precise and efficient surgery.

> Optics and illumination
   Precision Leica optics paired with a dual LED and halogen illumination system for a brilliant, stable red reflex

> Ergonomic design and ease of use
   Excellent vision, comfortable posture for the surgeon, and intuitive control for efficient workflow and precision microsurgery

> Total image management
   High-definition video for display, documentation, and communication of procedures and cases

> Flexibility with long term value
   OpenArchitecture to best handle a variety of surgical procedures, use of special accessories, and adapt to future needs
Razor-sharp, high-resolution imaging with brilliant, stable red reflex

The unique combination of halogen and LED delivers bright, three-dimensional illumination and excellent red reflex. This innovation, paired with outstanding Leica optics, gives surgeons unprecedented vision to perform both cataract and retinal surgeries.

**Leica optics**

Images with natural color, superior depth of field, and high contrast deliver crucial information for successful ophthalmic surgery. The Leica M822 incorporates proven 800-series APO OptiChrome optics for high resolution of the smallest details.

**Leica Low light concept**

The extraordinary degree of light transmission and the high efficiency of the coaxial OttoFlex provide the surgeon with a bright, highly defined image, even at low light levels. The benefits for patient and surgeon are many: a more natural image for greater viewing comfort, reduced corneal glare, and greater efficiency – which can translate into better surgical outcomes.

**Brilliant, STABLE red reflex**

With coaxial OttoFlex technology, the Leica M822 provides unsurpassed red reflex. Even the smallest cortical fragments can be clearly seen with minimal light. The large coaxial OttoFlex diameter provides stable red reflex throughout all steps of cataract surgery. Even if the eye moves intra-operatively during phaco, it remains in the field of illumination.

The Leica M822 builds on the success of the Leica M800 family, and includes a series of refinements and new features to give surgeons even more viewing comfort and flexibility.
Total cost of microscope ownership

(General illustration)

- Leica M822 F20 / F40 / C40 / CT40 with LED and direct halogen
- Other microscopes with halogen only and fiber optic cable
- Other microscopes with xenon and fiber optic cable

Comparison is based on initial purchase price, average consumption of bulbs and periodic fiber optic cable replacement costs.

Start saving from day one with the Leica M822 F20 / F40.
The dependable choice

An LED light source in a surgical microscope offers significant advantages over xenon and halogen sources. The nominal service life of an LED is up to 60,000 hours. In comparison, xenon and halogen lamps, but also fiber optic cables, need to be changed frequently. The reduced service requirement means fewer interruptions during surgery, more uptime, and smoother workflow.

Eco-friendly technology

As efficient lighting technology, such as LED, become the norm, it is changing the energy paradigm. LED light has a lower energy consumption, longer lifespan, and greater durability and reliability than other sources. These characteristics, combined with Leica’s Low Light Concept, result in an environmentally-friendly microscope.

Cost effective

LED illumination adds value by reducing operating costs throughout the life of the microscope. But the real savings is this: fewer lamp changes mean fewer disruptions and less downtime, which enhances efficiency.

The dependable choice

Carefully engineered

Leica Microsystems first introduced LED technology into ophthalmic surgical microscopes in 2008. With continued development and refinements, the Leica M822 microscope features LED technology, which offers halogen-like light for a natural color rendering.

Supports safe surgery

The Leica M822 microscope combines high transmission optics with a dual illumination system consisting of LED plus halogen. The result: a surgeon is free to adjust the optimum light balance, at the lowest possible light intensity, to achieve the best results in terms of red reflex, contrast, and recognition of important details.

Eco-friendly technology

The LED main light source provides many tangible and eco-friendly benefits in addition to a comfortable view.
Working in comfort allows the surgeon to have full concentration. The Leica M822 is designed to not only give surgeons the best possible view, but also help them to feel better while working, day in and day out. Natural posture and fluid movement can mean less tension, less fatigue, and uninterrupted concentration.

ERGONOMIC DESIGN AND EASE OF USE
Temporal approach for cataract surgery

The Leica Rotatable Beamsplitter is the world’s first two-beampath solution for temporal approach cataract surgery. The easy, side-to-side quick change of the optics for the assistant observer saves time between cases and increases efficiency in the operating room.

Auto Reset for the next operation

When the surgeon pushes the swingarm up and away from the operating table after each procedure, all microscope functions automatically reset. Now the microscope is ready for the next operation. The staff does not need to reset the system beforehand, which saves time and provides peace of mind for staff and the surgeon.

Variety of floor stands and ceiling mounts

The microscope is very convenient to position and move in the operating room. Leica offers floor stands and two spacesaving ceiling mounts for the Leica M822, so the optimal setup can be selected for any OR. Whether on a stand or ceiling mount, the swingarm provides long reach and quickly adjusts into position, locking in for a rock-steady view.
Simple and versatile control

The user-friendly touchscreen control unit offers intuitive control of all microscope functions. Up to 30 surgeons can set their individual preferences, so the microscope is always ready for each surgeon. With the touch of a button, the screen switches between microscope control display and real-time video monitor (two-in-one display).

Multifunction cabled and wireless foot switches

To meet the needs of all users, four models of foot switches are available: cabled or wireless, 12-function or 16-function, which offers four additional freely programmable microscope or accessory functions. The Leica Wireless Footswitch offers maximum mobility for fast, easy adjustments.

Presets for repetitive procedures

StepCycle allows the surgeon to program and switch between predefined settings such as illumination, focus, and zoom for each step of a procedure. He or she can select these presets using the footswitch, which saves time and keeps the hands free for uninterrupted work.

During surgery

High definition video for display, documentation, and communication

When the surgeon wants to share still images or videos with OR staff in real time, show a colleague an interesting case, document a procedure for referring physicians, and facilitate consultation with a family – HD and the use of mobile devices are now standard.

**Standard and/or HD videos**

The Leica M822 OpenArchitecture allows the capture of digital standard videos and still images with a variety of commercially available cameras and recording systems. With the optional Leica HD C100 high definition medical grade camera and the Med X Change video recording and documentation systems, surgical cases can now be recorded in best quality.

**Download and share**

The Med X Mobile® application uniquely facilitates wireless transfer of HD videos and still images from the microscope capture system to the Apple® iPhone®, iPod Touch®, or iPad® within seconds. With a USB cable, selected files can also be transferred to most Android devices. This allows cases to be transported, viewed, and discussed with colleagues or the patient’s family immediately after surgery.

**Modern video technology**

The Leica M822 offers an ideal package for capturing and exchanging video information:

- State-of-the-art HD recording system with MPEG4 video compression and picture-in-picture function
- Leica HD C100 high definition medical grade camera with newest imaging technology
- Selection of unique Leica video adapters for intra-operative fine focus of a video with manual or remote control, and integrated zoom function

FLEXIBILITY WITH LONG-TERM VALUE

Flexibility today and compatibility tomorrow add up to a smart, long-term investment

The Leica M822 includes mechanical and electronic interfaces to accept and easily mount a wide range of accessories – now and into the future. These improve workflow, support better surgical outcomes, and allow new surgical techniques to be adopted.

Leica RUV800

The Leica RUV800 is the solution for panoramic viewing in retinal surgery. The integrated inverter gives the surgeon, assistant, and video camera the same upright view of the retina. The Leica M822 also fully integrates the commonly used wide-angle observation systems or stereo image inverters, such as the OCULUS SDI / BIOM.

Leica slit illuminator

This intra-operative precision surgical slit lamp is ideal for anterior and posterior segment surgery. Using the Leica slit lamp, both of the surgeon’s hands are free for the operation, which allows a more fluid procedure.

leica keratoscope

The Leica Keratoscope is an integrated, cost-efficient aid to determine astigmatism in anterior segment surgery.

Leica DI C800

With the Leica DI C800 head-up display, images from digital sources, providing an XGA signal, can be projected directly into the surgeon’s eyepiece. This cockpit-style display can show data precisely where the surgeon needs it.

Leica ToricEyePiece

The Leica ToricEyePiece is a cost-effective, easy-to-use, time-saving aid for Toric IOL placement. The rotatable scale is superimposed over the microscope image to help the surgeon find the correct IOL positioning.

Using one microscope for cataract and vitreoretinal surgery is a very economical approach. It is easy to change the Leica M822 from one setup to the other.

ILLUMINATION

Main lamp LED
Coaxial OttoFlex Two halogen lamps 12 V / 50 W
Quick-change lamp mount With two 12 V / 50 W halogen lamps for coaxial OttoFlex

LEICA F20 FLOOR STAND

Type Floor stand with 3 friction brakes
Balancing Continuously adjustable gas spring
Load Max. 11.5 kg accessories attached to the microscope
Reach Max. 1480 mm
Vertical range 650 mm
Transport height Min. 1940 mm
Weight Approx. 270 kg as a fully configured system
XY-unit Motorized, movement range 50 x 50 mm, with automatic reset
Tilt mechanism Motorized, +15° / –50°
Hand / foot switches 16- or 12-function foot switch with controls arranged longitudinally or transversally, wired or wireless
12-function hand switch
Control unit Two-in-one display: control and video display in one. The latest electronic control for the continuous governing of all motor functions and the light intensity. Data shown by means of LCD, with adjustable contrast and brightness. Operation by modern touchscreen control. ISUS Intelligent Setup System, menu selection based on unique software for user specific configuration, with built-in electronic auto-diagnosis and user support.
