THUNDER Imaging Systems

Decode 3D Biology in Real Time*

THUNDER OFFLINE STATION

THUNDER Imagers remove the out-of-focus blur that comes with three-dimensional samples through Computational Clearing.

The THUNDER Offline station allows you to get more out of your THUNDER Imager by offloading data processing and analysis to a remote station, freeing up the system to focus solely on image acquisition.

Empower your team with more acquisition time and maximize your analysis time.

*in accordance with ISO/IEC 2382:2015

With the THUNDER Offline station, you have these advantages:

- > Process and analyze your images with a dedicated remote system
- > Free up the THUNDER Imager to run more image acquisition work
- > Conduct your analysis simultaneously in a remote station while the imager continues running acquisition in parallel
- > Eliminate the need to wait for the system to be free before starting your analysis
